INNOVATION

Artificial Intelligence

Baker Donelson is proud to be an early adopter of artificial intelligence (AI). By using cutting-edge technology to increase efficiency on day-to-day tasks, we save time for higher-value activities: developing sound strategy, understanding the bigger picture, and helping our clients achieve their legal and business goals.

We deploy HighQ, a machine learning AI technology for contract lifecycle management. Our attorneys use HighQ to streamline contract intake and tracking processes, complete contract reviews faster, provide clients with full portfolio visibility, and capture data that will allow for continuous improvement.

We also utilize Drafting Assistant, an AI tool that streamlines the legal document creation process for both transactional and litigation documents. Drafting Assistant allows our lawyers to draft documents faster and with greater accuracy through the use of model documents and automated templates. The software fully integrates with another legal AI tool in our arsenal, Westlaw Edge, which brings together a suite of legal research tools. The integration of these two tools makes it easier and more efficient to complete common drafting tasks such as inserting citations, locating authority, creating a table of authorities, and proofreading.
